Shiny/R Error Questions

Goal: Create Conditional renderUI Panels That Only Appear After a Previous Selection is Made and Only Show Options Relevant to a Selection(s)

App "Works", but I Get These Errors

```
Warning: Error in : Problem with `filter()` input `..1`.
x Input `..1` must be of size 12 or 1, not size 0.
i Input `..1` is `Food == input$food & Category == input$category`.
  113: <Anonymous>
```

Would Also Like to Decipher this Common Error I Get: "argument is of length zero"

"argument is of length zero" is a very specific problem that comes from one of my least-liked elements of R. Let me demonstrate the problem:

```
> FALSE == "turnip"
[1] FALSE
> TRUE == "turnip"
[1] FALSE
> NA == "turnip"
[1] NA
> NULL == "turnip"
logical(0)
```

I still don't follow this guy no matter how many times I read it
